

# Benefits of a Limescale-Free House

It is difficult to state exactly when and in which order the benefits will occur, due to many variables:

- Water consumption
- Degree of water hardness
- Amount of limescale build-up
- How long the plumbing system has been installed
- Chemical composition
- Conductivity of water

In general, you will observe the following effects:

## **Within the First 4 Weeks**

- Shampoos, conditioners, and soaps rinse easily using less water
- Surfaces in contact with water will be easier to clean
- If clear of scale, shower heads, taps etc; will not become re-contaminated
- Washing machines will require less powder
- Dishwashers need less salt - if any
- Hair and skin start to feel softer and healthier
- Less shampoo, conditioner, detergents, fabric conditioners and soaps will be needed

## **After 4 weeks**

- Limescale formed on Wc's and taps will start to soften, can be easily removed and will not reappear
- Water flow may start to increase (in circumstances where very heavy deposits existed)
- Softer clothes as fibres become scale-free
- Can help sufferers of eczema, psoriasis, and dry skin
- Mould on shower curtains and tile grout will be reduced
- Streak free car cleaning

## **Long Term Effects**

- Extended life of water appliances and lower maintenance costs
- Removes existing scale
- Kinder to skin and hair - ideal for babies
- Saves energy - lower water heating costs
