

How to Fit the Eddy Electronic Descaler

It's easy - As easy as 1, 2, 3

Step 1 - Wind two coils of wire (supplied) onto your incoming cold water supply pipe. It does not matter if the pipe is horizontal or vertical, or which way the water flows through the coils.

Step 2 - Mount the main Eddy unit to a nearby wall or panel using the adhesive pads provided. Plug in the red and yellow cables to the main unit as shown in the instruction manual.

Step 3 - Plug in the power unit provided to a nearby electricity supply. Switch on at the supply and check that all the lights on the Eddy unit are illuminated. That's it Easy!

Fit an Eddy water descaler to combat the nuisance of hard water and limescale in the home.
