

How to Clean Up Dangerous Indoor Air Pollution

Health professionals know the importance of breathing clean air and are aware of the dangers of air pollution. Experts and the E.P.A. have known for years that indoor air pollution is a considerable health risk and problem, which is up to **100 times worse than outdoor air pollution**. These experts also know that the biggest cause of indoor air pollution is your vacuum cleaner. All of the fine dirt, approximately 30% of the matter pulled from the floor is blown through the pores of your bag, as well as the seams, fittings and structural connections of your vacuum. This fine filth is blown into the air to resettle or be inhaled into your lungs and those of your family. A high percentage of these lung damaging particles stay in your lungs forever. Your home and air accumulates increasingly dangerous levels of literally millions of bacteria, viruses, microscopic bugs, such as carpet mites and beetles, along with their by-products such as feces. You are also confronted with an increase of synthetic fibers, asbestos, mold, fungi, pet dander, office machine toner dust, combustion particulates, and hundreds of other types of lung damaging particles; and these health damaging pollutants. The pollutants are compounded in our home and lungs because of this recycling by your current vacuum.

Independent testing has proven that there is only one vacuum cleaner that actually does not cause air pollution. **The Miele removes and contains** (does not allow dispersion) **of 99.97+% of ALL particles above .3 microns**. No other vacuum cleaner has achieved this! Many other manufacturers make bold claims, however, they have tricky wording such as "particles down to, or as small as." Or they just print fraudulent specifications which can not be verified. When independently tested, they actually capture only a very small percentage of the lung damaging fine particle pollution. The Miele was developed in Germany and has continued to improve over the last 75 years.

At last, the perfect vacuum cleaner has evolved! For the last few years vacuum cleaners have been evaluated in the laboratories of Universities, allergy centers and independent air

pollution laboratories. **The Miele vacuum cleaner is ALWAYS RATED #1 by all who have tested it against other vacuum cleaners.** The Miele vacuum cleaner is ALWAYS RATED #1 as the cleanliest (lowest air pollution), most powerful, quietest, easiest to use, lightest in weight, most durable and most attractive vacuum cleaner by independent testers throughout the world. Call us for independent test reports.

This is the Porsche of vacuum cleaners. But it doesn't carry a Porsche price tag. In fact, the Miele costs less than other high quality vacuum cleaners. Does the highest quality at a reasonable price sound too good to be true? See it for yourself. The Miele outperforms, in every respect, all competitors including those priced 2-3 times higher than the Miele. If you are interested in breathing clean air for a healthier, happier life or are just interested in owning the highest technology/quality vacuum cleaner in the world, give us a call.

We are offering a free in-home demonstration.

There are no obligations or pushy sales people. The 20 minutes you spend with us will give you an opportunity to see the Miele in action and to make a positive change in your families health. It also helps to make vacuuming a lot more fun. Interest free, easy payment plans available for those with good credit. If you can't afford a Miele yourself I will still pay you \$50 for each person you refer to me who makes a purchase for cleaner air. You probably know someone who would like to breathe cleaner air, have a cleaner home, dust much less often, and who doesn't like their noisy, low-powered, low quality vacuum cleaner, literally stinking with pollution.

The Miele Vacuum Cleaner
Rated #1 by the experts!
