

If your physician hasn't prescribed a Miele for you yet - change doctors!

(Because your doctor is either not oriented toward preventive medicine or isn't up on current medical studies and technology.)

Scientific tests prove that the Miele may be the most important and beneficial health product of the century.

One E.P.A. study proved that air pollution kills many times more people every year than automobile accidents. Another E.P.A. study proved that indoor air pollution is up to 100 times worse for you than outdoor air pollution. An Independent study proved that vacuum cleaners are the cause of up to 90% of indoor air pollution. Another Government study has shown that people spend up to 90% of their time indoors. **Conclusion: Air pollution caused by vacuum cleaners probably kills more people every year than automobile accidents.** The reason: Only approximately 2/3rds of the dirt vacuum cleaners pick up stays in the vacuum cleaner. Approximately 1/3rd of the dirt (all the smallest particles) are blown through the pores of the bag and/or out the seams of the vacuum cleaner and go into the air you breathe. The exhaust from vacuums is deadly! Your vacuum is only safe when it is turned off and in the garage. **Fact #1** Independent, third party, testing laboratories have proven that there is only one virtually pollution free vacuum cleaner for residential use. The Miele. It is the best vacuum at any price. You should ignore all the false clean air claims by other manufacturers. When tested by independent laboratories, they don't actually contain all the lung-damaging particles and other filth as they claim. Don't be another victim! Some people, who thought they saved money, buying something other than a Miele, ended up with something far inferior to a Miele. Sadly, they find out later that they wasted their money and end up having to buy a Miele later anyway. The other brands have H.E.P.A. filters or water to fool the consumer into thinking the exhaust air will be clean. However, mainly due to air leaks, none of them keep many of the very fine particles in the vacuum. **Fact #2** If everyone used a Miele, more lives would be saved than by air bags and seat belts in automobiles. **Fact #3** When most Government officials become aware of the fact that the Miele can save more lives than seat belts and air bags, it may be mandated that you buy one. High emission vacuums will probably be outlawed! Leaving only the Miele. **Fact #4** Miele vacuums are in stock and available for sale right now. Please don't wait until the government requires you to buy one before you start protecting your health! **Fact #5** The Miele vacuum is probably the best protection you can get for the prevention of lung cancer, emphysema, asthma, allergies, heart disease and dozens of other air pollution related diseases. **Fact #6** Medical doctors who are on the cutting edge of medical technology are actually prescribing Miele for all their patients for help in the prevention of many air pollution related diseases. The Miele is the only vacuum recommended by doctors

for patients who already have health problems. There aren't any others! **Fact #7** Nearly everyone who has purchased a Miele has noticed a cleaner feeling and fresher smelling home. They have also noticed that they cough and sneeze less often, are sick less often, and allergy / asthma symptoms were improved dramatically. The Miele also reduces house dusting by about 75%. This is a big work saver. The Miele captures those fine particles, unlike all the other vacuum cleaners which blow them into the air! **Because the Miele is the most worthwhile health product of the century, your money couldn't be better spent.** Replacing your vacuum cleaner is a lot cheaper and easier than replacing your lungs and other organs of your body. Check the price of transplants! Always remember that breathing dirt is much worse for you than eating or drinking it. Your digestive system filters out most impurities. Your nose is a very poor quality filter. Your nose, like your vacuum bag, can't filter below 25 microns. Your nose was not designed to filter small particles emitted from your vacuum cleaner. Particles larger than 0.5 microns are unable to pass through your lungs to be filtered out by the body's organs. Most of the 0.5 micron to 9 micron particles you breathe in are in your lungs forever! Proven fact! Every time you vacuum your floor, your lungs, as well as other organs in your body, become permanently damaged. Don't wait until you actually notice your body being damaged and start having health problems to see the Miele. Call now.....

Miele! The best health insurance money can buy!
 Compare, the Miele makes other vacuum cleaners completely obsolete!

<u>other vacuum cleaners</u>	<u>Miele</u>
give off pollution,damaging peoples health ...	no pollution, no health problems
greatly increases necessary house dusting	greatly decreases necessary house dusting
severely pollutes household air	cleans the air in the house while you vacuum
stink & smell from pollution	no stink, smells, or odors
low power and incomplete cleaning.....	most powerful vacuum on the market
heavy and difficult to push around	lightweight and easy to push
a chore to use and change bags	simple to use & 2 second bag changing
very noisy and unpleasant to use	extremely quiet and a pleasure to use
missed phone calls and doorbells	never miss important calls & doorbells
low quality & repairs are common	super high quality, and repairs are extremely rare
life expectancy 6 months to 10 years	typically last for decades

We are looking forward to meeting anyone interested in living a longer and healthier life. Also wanted are people who do not wish to breathe air polluted with germs, carpet mites, carpet beetles, their feces and by-products, and lung-damaging particles of every description. Stop by our store or see our free 30 minute in-home demonstration (in San Diego County). For literature, test reports, or appointments, **Jeff Shipper (858) 270-7532**.
